Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKRZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by DKRZ (German Cancer Research Center,
Heidelberg/Germany) within the CDNA sequencing consortium of the
German Genome Project. This clone (DKFZp686L21135) is available at
the RZPD Deutsches Reseourcensentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKRZp686L21135
Further information about the clone and the sequencing project is
available at http://mips.gsf.de/projects/cdna/.

Encyclopedia Project of Genome Exploration Research Group in Riken Bincyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5 'GAGAGAGAGAGACCATTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGARAGATTAATTAATTAATCCCCCCCCCCCCC 3']. cDNA was cleaved with BamHI and XhoI. cDNA of size comprised longer than 7 kb was selected before cloning. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3' end: BamHI. Hoet: DHODE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Adachi, J., Aizawa, K., Akahira, S., Akimura, T., Arai, A., Aono, H., Arakawa, T., Bono, H., Carninci, P., Fukuda, S., Fukunishi, Y., Arakawa, T., Bono, H., Carninci, P., Fukuda, S., Fukunishi, Y., Furuno, M., Hanagaki, T., Hara, A., Hayatsu, N., Hiramoto, K., Furuno, M., Hanagaki, T., Imotani, K., Ishii, Y., Itoh, M., Izawa, M., Kasukawa, T., Kato, H., Kawai, J., Kojima, Y., Konno, H., Kouda, M., Koya, S., Kurihara, C., Matsuyama, T., Miyazaki, A., Nishi, K., Nomazaki, K., Ohno, M., Okazaki, Y., Okido, T., Owa, C., Sakai, C., Sakai, Y., Sasaki, D., Saito, H., Sasaki, T., Sagabe, Y., Shibata, Y., Shinagawa, A., Shiraki, T., Sogabe, Y., Shibata, Y., Tagawa, A., Takahashi, F., Tanaka, T., Tojima, Y., Toya, T., Yaswaura, T., Yasunishi, A., Yoshida, K., Yoshino, M., Muramatsu, M. and Hayashizaki, Y. 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVBPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BX345014 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA clone CSODI067YN20 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer: Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and Ecox V sites of the pcMvSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                        The sequence represents a polynuclectide which encodes a novel human protein (NHP) containing a CUB domain (an extracellular domain). CUB proteins have been associated with regulating development, modulating cellular processes and preventing infectious disease. NHP nuclectide sequences are useful for gene therapy of physiological disorders or diseases. NHP oligonuclectides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nuclectide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a disease. The polynuclectides may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nuclectide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the administration of compounds that bind to NHP receptors or trigger NHP-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          540

Zambrowicz

The sequence represents a polymucleotide which encodes a novel human protein (NHP) containing a CUB domain (an extracellular domain). CUB proteins have been associated with regularing development, modulating cellular processes and preventing infectious disease. NHP nucleotide sequences are useful for gene therapy of physiological disorders or diseases. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nucleotide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a disease. The polymucleotides may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the indentification of compounds that bind to NHP receptors or trigger NHPmediated pathways

CUB proteins have been sesociated with regulating development, modulating callular processes and preventing infectious disease. NHP nucleotide sequences are useful for gene therapy of physiological disorders or diseases. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nucleotide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a connective tissue disorders and infertility for the diagnosis of a fective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the identification of compounds that bind to NHP receptors or trigger NHP-

The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention, antibodies which specifically bind a polypeptide of the invention, use of such antibodies for druge targeting; and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
patient by detecting a nucleic acid at least 80% identical to those of
the invention or by detecting a polypeptide of the invention. The
convention also relates to expression vectors and host cells comprising a
nucleic acid of the invention; antibodies which specifically bind a
polypeptide of the invention; antibodies which specifically bind a
polypeptide of the invention; antibodies of activity or expression of the
colypeptides and nucleic acids. The nucleic acids, polypeptides,
antibodies and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
attribodies and methods such as psoriasis, ischaemia, heart disease,
attribodies and sethodes are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia,
neovascularistaion syndromes, scarring and uterine fibroids. They may
also be useful in wound healing and in contraception. The present
sequence represents a nucleic acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                Human; differential expression; cancer; angiogenic disorder; fibrotic disorder; psoriasis; ischaemia; heart disease; atherosclerosis; inflammatory disease; autoimmune disease; retinal neovascularistaion syndrome; scarring; uterine fibroid; detection; diagnosis; prognosis; drug screening; drug targeting; wound healing; contraception; cytostatic; cardiant; immunomodulatory; vulnerary; gene therapy; vaccine; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hevezi PA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       941
                                                                     The present invention relates to a method for detecting cancer in a patient. The method comprises detecting in a biological sample from the patient a nucleotide or protein sequence comprising a sequence that is at least 80% identical to a nucleotide sequence (ADR46588-ADR46645) or protein sequence (ADR46548-ADR46645). The method is useful for detecting
                                                                                                                                                                                                                                                                                       GAGAGTGGATCCCACATTTCTGGCCGGGGTTTTTTGCTGACCTATGCGAGCAGCGACCAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TATAGAGATACCTCTTTATTGTGCAAAGCTGCCATCCATGCAGGAATAATTGCTGATGAA

The nucleic acids, proteins and antibodies specific to the proteins are nucleic acids, proteins and antibodies specific to the proteins are useful in screening assays, predictive medicine (e.g. diagnostic assays, prophylactic and therapeutic methods. The sequences are used in cancers), monitoring clinical trials and pharmacogenetics) and diagnostic and therapeutic methods. The sequences are used in cancers), hormonal disorders (e.g. miltiple sclerosis or lupus), neurological disorders (e.g. multiple sclerosis or lupus), neurological disorders (e.g. mycardial infarction or congestive heart disease), immune consorders (e.g. thrombocytopenia or anaemia) and disorders involving blood vessels (e.g. atherosclerosis or vasculitis). The nucleic cancer may also be used in chromosome mapping, tissue typing and forensic biology, and as surrogate markers. This sequence represents a secreted colypeptide-related cDNA of the invention. Note: The sequence data for this papernt was obtained in electronic format directly from USPFO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding a secreted protein (e.g. TANGO 202, TANGO 210 or INTERCEPT 217), useful for diagnosing, preventing or treating disorders such as cancer, diabetes or atherosclerosis, and in forensic biology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Accretectricidactarcricitatedecaecretreagarcaatargerecaracter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   780
polypeptide. The polynucleotides, polypeptides and compositions are useful for diagnosing, preventing and/or treating cancer, obesity, gastritis, diarrhoea, haemorrhoids, asthama, anaemia, graft-versus-host reactions, allergic reactions, cystic fibrosis, hypogonadism, cardiovascular disorders, arthritis, osteoarthritis, arteriosclerosis, hypogenesion, bacterial infections, psoriasis, diabetes mellitus, hepatitis, Alzbeimer's disease, Huntington's disease, Parkinson's disease, AIDS, tuberculosis, viral infections, malaria, goiter, infertility, endometriosis, wounds and muscular disorders. This sequence represents a human polymucleotide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          876

P-PSDB; ADI28019.

Claim 11; SEQ ID NO 47; 270pp; English.

thalassemia.

The invention relates to a novel isolated human extracellular matrix and cell adhesion molecule (referred to as ECMCAD 1-36), its biologically cell adhesion molecule (referred to as ECMCAD 1-36), its biologically coll active or immunogenic fragment or a sequence comprising 90 % identity to ECMCAD 1-36. The molecule is useful in the diagnosis, treatment and concoding nucleic acid are useful in the diagnosis, treatment and prevention of genetic disorder such as adrenoleukodystrophy, Down's prevention of genetic disorder such as adrenoleukodystrophy, Bown's concoding nucleic acid accepts (MIDS), adult respiratory distress such as acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, allergies, anemia, asthma, atherosclerosis, autoimmune systemia, asthma, atherosclerosis, autoimmune care a disease, multiple sclerosis, osteoporosis, psoriasis, rheumatoid arthritis, solaroderma, systemic lupus erythematosus, ulcerative colitis, uveitis, etc, a neurological disorder such as epilepsy, stroke, arthritis, scleroderma, systemic lupus erythematosus, ulcerative colitis, uveitis, etc, a neurological disorder such as epilepsy, stroke, alberostal, bacterial and viral meningitis, periodic paralysis, mental collaboration neuropathy, etc, connective tissue disorder such as solarosis, paget 's disease, multiple corporosis, paget 's disease, schenocrosis, osteomyelitis, concerned, giant cell tumor, psoriatic arthritis, infectious corporosis, paget is calerosis, etc, and a cell proliferative disorder such as actinic keratosis, atherosclerosis, hepatitis, psoriasis, cancers including adenocarcinoma, leukemia, lymphoma, melanoma, myeloma, etc. This sequence represents the cDNA sequence encoding one of the novel proteins

                                                                      The invention relates to an isolated neurophilin homologue polypeptide, termed zcub5. The polypeptide can be expressed by standard recombinant methodology. The zcub5 polypeptide and polymucleotide are useful in a variety of therapeutic, diagnostic and research applications. The collipse of producing antibodies, for imaging tumours or other sites of abnormal cell proliferation, for treating solid tumours, retinopathies (including diabetic retinopathy and macular degeneration), atherosclerosis, psoriasis, rheumatoid arthritis and growth factor-dependent pathologies, to design agonists and antagonists of neurophilin cemembrorin interactions, for repairing neurological damage due to stroke, head and spinal injuries, for treating neurodegenerative diseases such as multiple sclerosis, Alahahmer's disease, and Parkinson's disease, for mediating development and innervation of stomach tissue, for identifying, labeling, and isolating selected cell types, as a target for cell-specific delivery of diagnostic and therapeutic agent, and to identify inhibitor of zcub5 activity. The zcub5 polypeptide, of the present are useful in diagnosis or treatment of disporders associated with abnormal cell proliferation, including cancer, impaired or excessive vasculogenesis or anglosenesis and diseases of the mervane or any anglose or excessive vasculogenesis or anglose the human control or the present sequence represents a cDNA encoding the human

The sequence represents a cDNA which encodes human TANGO 229 polypeptide.
This protein and similar others exhibit the ability to affect growth,
proliferation, survival, differentiation, activity, morphology, or
movement/migration of, e.g. T calls and calls of the heart, liver,
pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph
node, peripheral blood leukocyte, bone marrow or thymus tissue. They can
be used as modularing agents for regulating callular processes, thus, the
proteins and their associated nucleic acids can be used to prognosticate,
processes. These disorders include abnormal blood coagulation, asthma,
anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery
anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery
anaphylaxis, attention deficit disorder, Crobn's disease, gastroenteritis,
goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary
cembolism and muscular dystrophy. Antibodies to disorders such as these
can be made by providing a polypeptide of the invention to an immuno-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid molecule for diagnosis, prevention, and therapy of human and other animal disorder, or as modulating agent for regulating cellular processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The invention relates to secreted polypeptide-related proteins and nucleic acids (TANGO and INTERCEPT proteins and nucleic acids). The nucleic acids, proteins and antibodies specific to the proteins are nucleic acids, proteins and antibodies specific to the proteins are concerning assays, predictive medicine (e.g. diagnostic assays, predictive methods. The sequences are used in prophlatic and therapeutic methods. The sequences are used in diagnosting, preventing or treating proliferative disorders (e.g. disorders (e.g. multiple) sclerosis or thyroid disorders (e.g. Alzheimer's disorders or Parkinson's disease), cardiovascular (e.g. Alzheimer's disorders or Parkinson's disease), cardiovascular clasorders (e.g. thrombocytopenia or ansemia) and disorders (involving blood vessels (e.g. atherosclerosis or vasculitis). The nucleic acids may also be used in chromosome mapping, tissue typing and forensic bolypeptide-related cDNA of the invention. Note: The sequence data for this patent was obtained in electronic format directly from USPTO at

The invention relates to human polynucleotides and the polypeptides they encode. The invention also relates to a host cell containing a concode. The invention also relates to a host cell containing a polymeptide of the invention, an antibody which selectively binds with a polypeptide of the invention, a method of detecting the presence of a polypeptide in a sample, a method of identifying a compound which binds complement to polypeptide. The polymeptide is a method of modulating the activity of a polypeptide. The polymeptides, polypeptides and compositions are useful for diagnosing, preventing and/or treating cancer, obesity, cascions, allergic reactions, cystic fibrosis, hypogonadism, cardiovascular disorders, arthritis, osteoarthritis, arteriosclerosis, hypogonadism, cardiovascular disorders, arthritis, osteoarthritis, arteriosclerosis, hypogonadism, bacterial infections, psoriasis, diabetes mellitus, hepatitis, alzheimer's disease, Huntington's disease, Parkinson's disease, AIDS, tuberculosis, viral infections, malaria, goiter, infertility, endometricasis, wounds and muscular disorders. This sequence cata for this patent did not form part of the printed specification but was obtained in ejectronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 ACAGTACCAAAGGGGGAAAAGACTGATTCTGAGGTTGGGAGATTTGGATATCGAATCCCAG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New TANGO, INTERCEPT, and MANGO, useful in diagnosing, preventing, and treating cancer, constitution, hemorrhoids, cystic fibrosis, hypogonadism, psoriasis, hepatitis, Alzheimer's disease, AIDS, tuberculosis, malaria, goiter, infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 ATGACATCTAAGAATTATCCCGGGACCTACCCCAATCACACTGTTTGCGAAAAGACAATT

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of an arker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer. The level of expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.

marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein c fragment corresponding to the marker. The presence of protein or protein c fragment is detected using an antibody that specifically binds with the c fragment is detected using an antibody that specifically binds with the c protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed colorynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker or anneals with a portion of c parient which involves detecting expression of the marker in a patient c patient which involves detecting expression of the marker in a patient c time and comparing the level of expression of the marker in a patient c time and comparing the level of expression. The method at a subsequent c time and comparing the level of expression. The method as marker, c using an ovarian tissue sample. A composition comprising a marker. C This sequence represents a human ovarian cancer DNA marker of the comparing the representation to the patient of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

DI ACK DODDEDO

u	BLACK BURDERS
	IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
	FADED TEXT OR DRAWING
	BLURED OR ILLEGIBLE TEXT OR DRAWING
	SKEWED/SLANTED IMAGES
	COLORED OR BLACK AND WHITE PHOTOGRAPHS
a .	GRAY SCALE DOCUMENTS
	LINES OR MARKS ON ORIGINAL DOCUMENT
	REPERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
	OTHER:

IMAGES ARE BEST AVAILABLE COPY.
As rescanning documents will not correct images problems checked, please do not report the problems to the IFW Image Problem Mailbox
